Education

University of Wisconsin–Madison

M.S. in Computer Science, GPA: 3.6

May 2025

- Relevant Coursework: Building User Interfaces (UI/UX), Human-Computer Interaction, AI and Ethics in Computer Science, Data Visualization, Data Management, Big Data Systems, Virtual Reality, Mobile Apps (Android)

B.S. in Computer Science, minor in Data Science, GPA: 3.6

Dec 2023

- Distinctive Scholastic Achievement & Dean's List

Technical Skills

- **Languages & Frameworks:** Java, Python, React, TypeScript, JavaScript, Material UI, React Native, Node.js, SQL
- **Tools:** PostgreSQL, REST APIs, Sass, Responsive Design, Accessibility (WCAG), Performance Optimization

Work Experience

Target Corporation

Jun 2024 – Aug 2024

Software Engineer Intern

- Engineered a React and TypeScript onboarding guide to standardize environment configuration, enabling engineers to self-serve and reducing internal setup time by 20% and aligning deployments ahead of launch
- Designed 10+ Adobe XD wireframes and implemented scalable React form components so UX changes shipped faster, accelerating iteration cycles and improving consistency across 3 responsive breakpoints
- Tested UI workflows with WCAG-focused cross-browser validation plus Jest/React Testing Library/Cypress coverage so regressions were caught earlier, reducing accessibility defects and aligning components with design-system standards

Intel Corporation

Nov 2023 – Jan 2024

Software Engineer Intern

- Developed a Python file-tracking tool with unit tests covering 20+ shared-drive edge cases, allowing failures to be caught pre-release, cutting system load by 50% and improving reliability in production usage
- Optimized core processing logic and integrated the tool into live workflows so runs completed faster, reducing execution time by 17% and enabling stable performance for more than 10 concurrent users
- Enhanced observability using structured logging and monitoring signals so debugging became traceable, reducing issue triage time by 30% and accelerating fixes during development and QA cycles

Target Corporation

Jun 2023 – Aug 2023

Software Engineer Intern

- Used React and TypeScript to implement a responsive internal web app with reusable UI components, enabling workflows to scale across devices and supporting over 28,000% growth in deployment locations
- Implemented Kotlin REST APIs and validated 100+ request/response flows via API-spec testing so services stayed reliable, improving efficiency by 30% and strengthening error handling across system boundaries
- Optimized PostgreSQL queries using indexing and query-plan analysis so high-traffic pages responded faster, delivering 20% lower query latency under load testing and improving performance for internal support teams

The J.M. Smucker Company

May 2022 – Aug 2022

Software Engineer Intern

- Modernized a legacy Oracle APEX supply-chain app so data synced in real time, eliminating manual reconciliation and improving tracking efficiency by 25% with clearer end-to-end visibility
- Automated 10+ operational tasks with Bash so backups, deploys, and checks ran hands-free, reducing human error and cutting after-hours support tickets by 50%

Projects

Full-Stack Developer | RachaelTLang.com

Dec 2023 – Present

- Designed and deployed a responsive personal website using HTML, CSS, and JavaScript, structuring semantic layouts, organizing content for clarity, and optimizing cross-browser performance for consistent usability
- Enhanced interactivity and user experience with lightweight JavaScript by adding dynamic components, refining navigation flows, and iterating on UI improvements while preserving a fast, accessible static architecture
- Automated releases through Git-based deployment workflows by configuring repository builds, managing DNS and HTTPS, and streamlining production updates to improve reliability and maintainability
